WILLS'S CIGARETTES

Steam Navvy.

The huge Steam Navvy is used for excavations on a large scale. The largest weigh nearly 100 tons, and the dipper can scoop up five cubic yards of material, often weighing 10 tons, at a single stroke. The scoop, which is armed with teeth, is thrust against the bank about to be excavated, and raised slowly, scraping off a portion of the surface. When the dipper is full, the neck is raised, swung round, and the load deposited in a dump car.
